Senior SDET | Mobile Automation Specialist (iOS & Android) | Appium, Espresso, XCUITest | CI/CD

Senior SDET specializing in iOS and Android mobile automation with 10+ years of experience across high-scale consumer applications and complex multi-platform systems.

One of a small subset of engineers with deep hands-on expertise across all three major mobile automation stacks — Appium, Espresso, and XCUITest — designing and maintaining scalable frameworks integrated into CI/CD pipelines.

Strong experience working directly within mobile engineering environments using Swift and Kotlin, enabling effective collaboration with developers and faster issue resolution across the SDLC.

Proven track record of reducing regression time, improving automation reliability, and increasing release confidence across mobile platforms.

TECHNICAL SKILLS

Mobile Automation: Appium, Espresso, XCUITest (iOS & Android)

Languages: Kotlin, Swift, Java, C#, JavaScript, TypeScript, SQL

CI/CD & DevOps: Azure DevOps, Jenkins, Git, Parallel Execution Pipelines

Framework Design: Page Object Model, Modular Architecture, Reusable Libraries

Mobile Development Tools: Xcode, Android Studio

Additional Testing: Playwright, Selenium, API Testing (REST, Postman)

Tools: JIRA, Confluence

PROFESSIONAL EXPERIENCE

Chipotle Mexican Grill

Nov 2025 – Present

Senior SDET — Mobile Automation (iOS & Android) | Newport Beach, CA (Hybrid)

- Build and maintain scalable iOS (Swift/XCUITest) and Android (Kotlin/Espresso) automation frameworks integrated into Azure DevOps CI/CD pipelines for a high-traffic consumer application used by millions.
- Designed and built a backend-driven API utility layer from scratch using Postman collections and endpoint contracts, creating reusable readers, data injectors, pollers, and validators to enable reliable API-driven test setup and validation.
- Configured Azure DevOps YAML pipelines to run iOS UI smoke tests as optional PR checks, enabling early regression signal on every pull request.
- Partner with mobile engineers through sprint planning, defect isolation, debugging, and release cycles to improve overall release confidence.

Career Sabbatical

Dec 2024 – Nov 2025

Entrepreneurial & Technical Pursuit

- Built and operated two independent businesses, designing systems for client workflows, scheduling, and service delivery.
- Designed and launched two full-production websites implementing payment integrations, automated workflows, booking systems, and analytics using WordPress, applying software engineering discipline to real business operations.

Embeta

Jul 2023 – Jan 2025

Staff Software Test Engineer — Mobile Systems

- Built and scaled a 29-device mobile automation lab using Appium/C#, reducing regression cycle time by 60% through parallel CI/CD execution.
- Led mobile automation strategy across iOS, Android, and device-integrated systems.
- Designed and implemented scalable automation frameworks supporting complex system interactions.

- Partnered with engineering teams on defect triage, code reviews, and release quality decisions.
- Reduced tooling costs by \$33K annually through infrastructure optimization.

Boston Scientific

Nov 2020 – Jul 2023

Senior Software QA Engineer — Mobile & Web

- Delivered automated test coverage across Android and iOS platforms using Appium, with additional support for web automation using Playwright.
- Built reusable framework components improving automation scalability and maintainability.
- Expanded end-to-end system coverage across mobile, web, and integrated workflows.
- Collaborated with engineering teams on design reviews, bug triage, and system-level quality.

Medtronic

Feb 2016 – Oct 2020

Software Test Engineer — Mobile Platforms

- Architected scalable mobile automation frameworks using Appium and Java across 30+ OS/device configurations.
- Converted manual test suites into automated coverage, reducing execution time from 30 days to 4 hours.
- Developed reusable test libraries and framework utilities improving development efficiency.
- Mentored engineers in mobile automation best practices and framework design.

EDUCATION

California State University, Fullerton

2019

Master of Science — Software Engineering

University of California, Santa Barbara

2010

Bachelor of Arts — History
